Emergency procedures (on campus)

- In the unlikely event of an emergency we may need to evacuate the building.
- If we need to evacuate, we will ask you to take your belongings and follow the green exit signs.
- We will move a safe distance from the building and maintain physical distancing whilst waiting until the emergency is over.
- In some circumstances, we might be asked to remain inside the building for our own safety. We call this a lockdown or shelter-in-place.
- Further information is available at [www.sydney.edu.au/emergency](https://powcoder.com)

Keeping our community safe

We can all help reduce the spread of COVID-19 through following good hygiene practices:

- **Wash hands regularly**, for at least 20 seconds with soap and water, or use an alcohol-based hand rub.
- **Cover your mouth** when coughing and sneezing with a tissue or a flexed elbow.
- Maintain a **distance of at least 1.5m** between yourself and others, where possible.
- **Avoid large gatherings**, where possible.
- **Avoid close contact** with anyone **with cold or flu symptoms**, e.g. fever, cough, runny nose or shortness of breath.

Keeping our community safe

- All students and staff who have cold or flu symptoms should **isolate** themselves from others.
- If you are unwell with cold or flu symptoms **please excuse yourself from this class** and we will support you to continue the work remotely.
- Make sure you read the information on **special consideration** in the unit outline.

Keeping our community safe

- The University is following advice from the government and related public health authorities.
 - For the latest information, see the [advice on the University website](#).
Assignment Project Exam Help
 - In some classes, especially those involving use of shared equipment, please follow additional advice from your coordinators.
https://powcoder.com
Add WeChat powcoder
 - Please take care of each other and yourselves and if you need support reach out to your unit coordinator or the health and wellbeing area of the [Current Students website](#).
-

Tips for students joining online

- Remember that you are still in a space with other students.
- Mute your microphone when not speaking.
- Use earphones or headphones - the mic is better and you'll disturb others less.
- If you have a webcam, please switch it on so we can see you!
- If you are speaking to the camera, make eye contact with the camera (and therefore your classmates and teacher).
- Try not to talk over someone else.
- Use the chat function to send messages to the teacher or classmates during class.

Tips for students learning online

- For tips and guides on learning online and the tools you will use, refer to [Learning while off campus resources](#) in Canvas.

UNIV_STUDENT_CANVAS_GUIDE > Pages > Learning while off campus

View All Pages

Learning while off campus

This is a unique situation for all of us. The University is working hard to make sure that you are receiving an excellent educational experience despite possibly not being able to learn on campus. Studying online may be an isolating experience - this page has some ideas to help you adjust to learning while off campus.

Remember to stay positive - this too will pass! Look after yourself and those around you, and prioritise your time accordingly. You will have productive and not-so-productive days - that is OK. Remember to snack healthily, take regular breaks, and reward yourself from time-to-time, especially after a challenging task.

On this page:

- [How can I keep up to date with my study?](#)
- [How should I access classes like lectures and tutorials?](#)
- [What should I do in a live-streamed class?](#)
- [How can I communicate with my teachers?](#)
- [How can I communicate with my classmates?](#)

Computer Networking: A TopDown Approach 6th or 7th edition, Jim Kurose and Keith Ross,

Some of the information on the slides of this course is taken from the companion material of this textbook that is subject to copyright 1996-2012, J.F Kurose and K.W. Ross, All Rights Reserved.

- Students attend scheduled classes, and devote an *extra* 6-9 hrs per week
 - doing assessments
 - preparing and reviewing for classes
 - revising and integrating the ideas
 - practice and self-assess
- Students are responsible learners
 - Participate in classes, constructively
 - Respect for one another (criticize ideas, not people)
 - Humility: none of us knows it all; each of us knows valuable things
 - Check canvas site at least once a week!
 - Notify academics whenever there are difficulties

- › Exam period: Final exam, 60%

Covers everything

Assignment Project Exam Help

<https://powcoder.com>

Add WeChat powcoder

- › School of CS policy: you must get at least 40% of the marks available on the exam, in order to pass the unit. (40% barrier on exam, less than 40% in the exam is automatically a FAIL.)
-

Special Consideration (University policy)

- If your performance on assessments is affected by illness or misadventure
- Follow proper bureaucratic procedures
 - Have professional practitioner sign special U.Syd form
 - Submit application for special consideration online, upload scans
 - Note you have only a quite short deadline for applying
 - http://sydney.edu.au/current_students/special_consideration/
- Also, notify coordinator by email *as soon as anything begins to go wrong*
- There is a similar process if you need special arrangements eg for religious observance, military service, representative sports

- Suppose you hand in work after the deadline:
- Penalty of 5% per day late, e.g.:
 - A good assignment that would normally get 9/10 and is 2 days late loses 10% of the full 10 marks, i.e. new mark = 8/10
 - An average assignment that would normally get 5/10 and is 5 days late loses 25% of the full 10 marks, i.e. new mark = 2.5/10
 - Assignments more than 10 days late get 0.
- Warning: submission sites get very slow near deadlines.
- You can resubmit if there is time before the deadline. Only the latest version will be marked.

Academic Integrity (University policy)

- “The University of Sydney is unequivocally opposed to, and intolerant of, plagiarism and academic dishonesty.
 - Academic dishonesty means seeking to obtain or obtaining academic advantage for oneself or for others (including in the assessment or publication of work) by dishonest or unfair means.
 - Plagiarism means presenting another person’s work as one’s own work by presenting, copying or reproducing it without appropriate acknowledgement of the source.” [from site below]
 - <http://sydney.edu.au/elearning/student/EI/index.shtml>
 - Submitted work is compared against other work (from students, the internet etc)
 - Turnitin
 - Penalties for academic dishonesty or plagiarism can be severe
 - Complete self-education AHEM1001
-

Assessment design and risks

Assessment types, risks and mitigating strategies

The [Academic Honesty in Coursework Policy 2015](#) requires that we review and renew assessments to eliminate or minimise opportunities for students to gain unfair advantage through plagiarism or academic dishonesty.

You should review the assessment each time a unit is offered, including redesigning assessment tasks to prevent any breaches of academic integrity from reoccurring and assessment tasks should not be reused in a way that would give some students an advantage or could be exploited for advantage.

The [Academic Honesty Procedures 2016](#) outline the steps unit coordinators should take when evaluating the risks to the integrity of assessment.

Schedule One of the Procedures also provides a Summary of Assessment Types, Risks and Mitigating Strategies and a risk assessment matrix developed by the Academic Board, which is provided here as an MS Word template: [risk assessment matrix template](#) (DOCX, 32k).

The use of Turnitin for the submission of all text-based written assignments is also mandatory. With the approval of the Deputy Vice-Chancellor (Education) other similarity detecting software may be used for other types of assessments. Where similarity detection software is used, it must also be declared in your unit of study outline.

Part 1 of the Taskforce report includes discussion of good practice for Assessment (section 2.3) and Exams (section 2.4) as well, and is available for download from the [educational integrity homepage](#).

Do you have a disability?

You may not think of yourself as having a 'disability' but the definition under the **Disability Discrimination Act** is broad and includes temporary or chronic medical conditions, physical or sensory disabilities, psychological conditions and learning disabilities.

The types of disabilities we see include: <https://powcoder.com>

anxiety, arthritis, asthma, asperger's disorder, ADHD, bipolar disorder, broken bones, cancer, cerebral palsy, chronic fatigue syndrome, crohn's disease, cystic fibrosis, depression, diabetes, dyslexia, epilepsy, hearing impairment, learning disability, mobility impairment, multiple sclerosis, post traumatic stress, schizophrenia, vision impairment, and much more.

Students needing assistance must register with Disability Services –

it is advisable to do this as early as possible.

<http://sydney.edu.au/study/academic-support/disability-support.html>

Learning support

COMP5416: Advanced Network Technologies

Assignment Project Exam Help

The unit introduces networking concepts beyond the best effort service of the core TCP/IP protocol suite. Understanding of the fundamental issues in building an integrated multi-service network for global Internet services, taking into account service objectives, application characteristics and needs and network mechanisms will be discussed. Enables students to understand the core issues and be aware of proposed solutions so they can actively follow and participate in the development of the Internet beyond the basic bit transport service.

Not a Nash
Equilibrium !

The tuple satisfies: no player has anything to gain by
changing only his own strategy

1's decision (1, 2) utility		Transmit	Keep silent
2's decision		Transmit (-5,-5)	Keep silent (0,10)
Transmit			
Keep silent		(10,0)	(0,0)

Nash Equilibrium?

1's decision (1, 2) utility		Transmit	Keep silent
2's decision	Transmit	$(-5, -5)$	$(0, 10)$
	Keep silent	$(10, 0)$	$(0, 0)$

Two Nash Equilibria

1's decision (1, 2) utility		Transmit	Keep silent
2's decision	Transmit	$(-5, -5)$	$(0, 10)$
	Keep silent	$(10, 0)$	$(0, 0)$

Two Nash Equilibria

This is still not ideal.

Solution: mixed strategy.

Assignment Project Exam Help

<https://powcoder.com>

Add WeChat powcoder

Each player can make probabilistic decision!

User 1: transmit with probability p_1

keep silent with probability $(1-p_1)$

User 2: transmit with probability p_2

keep silent with probability $(1-p_2)$

1's decision (1, 2) utility 2's decision	Transmit	Keep silent
	Transmit $(-5, -5)$ $p_1 * p_2$	Keep silent $(0, 10)$ $(1-p_1) * p_2$
Keep silent	$(10, 0)$ $p_1 * (1-p_2)$	$(0, 0)$ $(1-p_1) * (1-p_2)$

$$\begin{aligned} & -5 * p_1 * p_2 + 10 * p_1 * (1-p_2) + 0 * (1-p_1) * p_2 + 0 * (1-p_1) * (1-p_2) \\ & = -5 * p_1 * p_2 + 10 * p_1 * (1-p_2) \end{aligned}$$

Let's try $p_2=2/3$

User 1's average utility

$$-5 * p_1 * p_2 + 10 * p_1 * (1 - p_2)$$

$$= -5 * p_1 * 2/3 + 10 * p_1 * 1/3$$

$$= 0$$

Add WeChat powcoder

No matter how to change p_1 , user 1's utility is 0

Similarly

If $p_1=2/3$

No matter how to change p_2 , user 1's utility is 0

$p_1=p_2=2/3$ is a Nash Equilibrium

Why?

Assignment Project Exam Help

User 1's average utility

If $p_2=2/3$

<https://powcoder.com>

No matter how to change p_1 , user 1's utility is 0

If $p_1=2/3$

No matter how to change p_2 , user 1's utility is 0

What happens if users are cooperative?

If the users are not selfish

Assignment Project Exam Help

<https://powcoder.com>

$p_1=p_2=1/3$ is the optimal solution

Add WeChat powcoder

User 1's average utility is $5/3$

User 2's average utility is $5/3$

Network performance in summery

Situations	Solution	Utility
Selfish users	$p1=2/3,$ $p2=2/3$	(0,0)
Cooperative users	$p1=1/3$ $p2=1/3$	(5/3,5/3)

Assignment Project Exam Help
Delays

<https://powcoder.com>

Add WeChat powcoder

Four sources of packet delay

d_{proc} : nodal processing

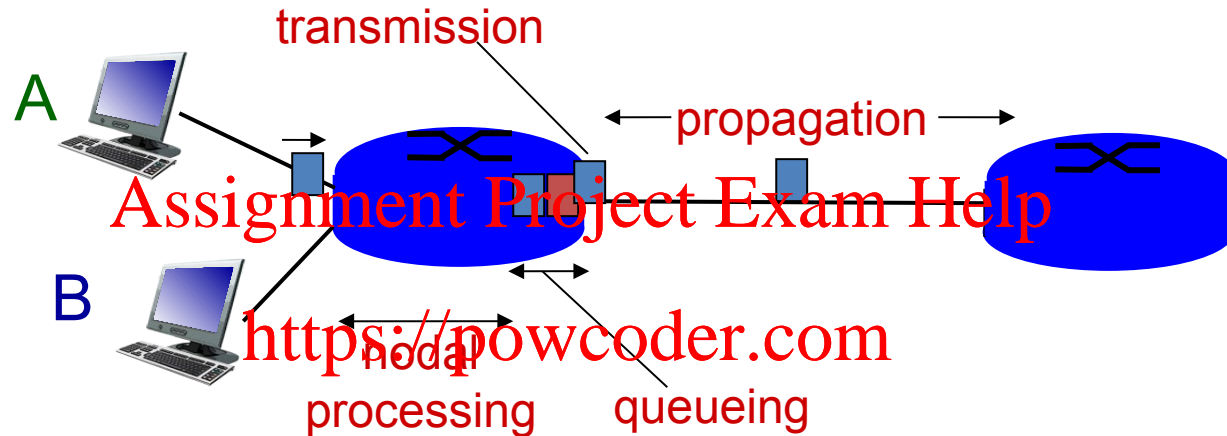

- check bit errors
- determine output link
- typically < msec

d_{queue} : queueing delay

- time waiting at output link for transmission
- depends on congestion level of router

Four sources of packet delay

$$d_{\text{nodal}} = d_{\text{proc}} + d_{\text{queue}} + d_{\text{trans}} + d_{\text{prop}}$$

d_{trans} : transmission delay:

- L : packet length (bits)
- R : link bandwidth (bps)
- $d_{\text{trans}} = L/R$

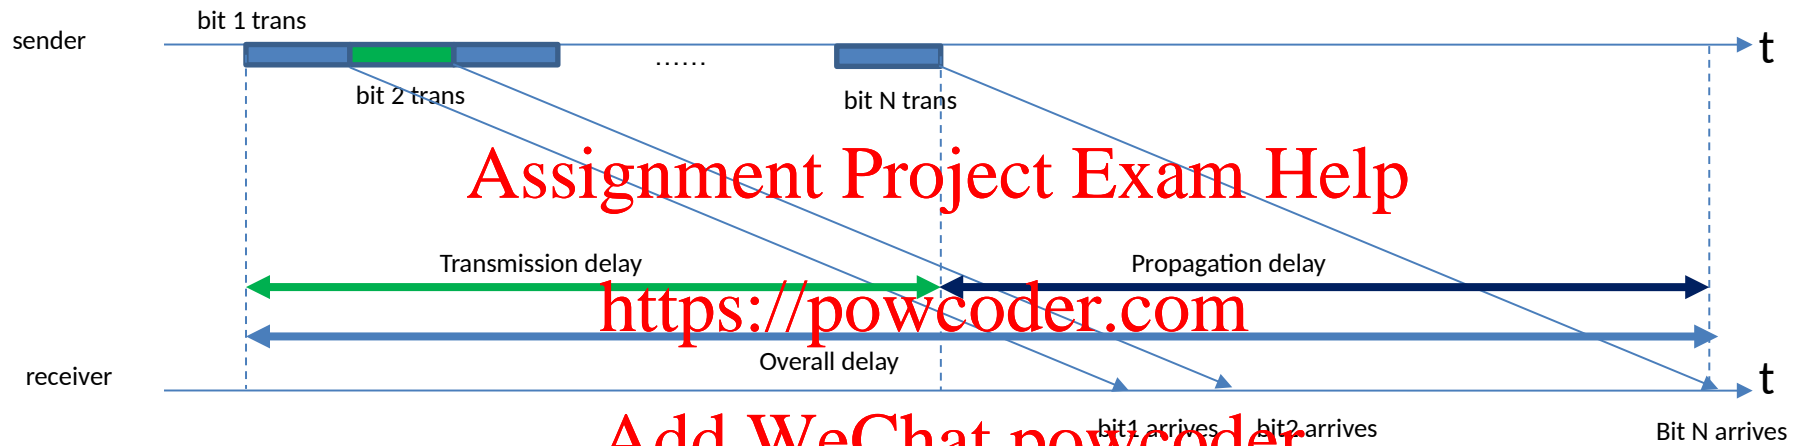

d_{prop} : propagation delay:

- d : length of physical link
- s : propagation speed in medium ($\sim 2 \times 10^8$ m/sec)
- $d_{\text{prop}} = d/s$

d_{trans} and d_{prop}
very different

Transmission Delay and Propagation Delay

Store-and-forward

- › takes L/R seconds to transmit (push out) L -bit packet into link at R bps

- › **store and forward**: entire packet must arrive at router before it can be transmitted on next link

- › **end-end delay**: $2 L/R$ (assuming zero propagation delay)

› *one-hop numerical example:*

- $L = 7.5$ Mbits
- $R = 1.5$ Mbps
- delay = 5 sec

- › R : link bandwidth (bps)
- › L : packet length (bits)
- › a : average packet arrival rate

Assignment Project Exam Help

<https://powcoder.com>

traffic intensity = La/R

Add WeChat powcoder

- ❖ $La/R \sim 0$: avg. queueing delay small
- ❖ $La/R < \sim 1$: avg. queueing delay large
- ❖ $La/R > 1$: more “work” arriving than can be serviced, average delay infinite!

$La/R \sim 0$

$La/R < \sim 1$
